IPL Permanent Hair Reduction

Intense Pulse Light (IPL) is similar to laser, but with some noticeable differences. It is used effectively in different cases such as permanent hair reduction for most skin types and colours, skin rejuvenation, wrinkle reduction and treatment of acne. IPL can be used to treat most areas of the body in women and men, including the face, and is extremely safe. IPL can also improve skin tone and texture, lift and hydrate skin and even out pigmentation.

The procedure can take anywhere from 30 minutes to an hour, depending on the size of the area being treated. Treatments can be repeated at approximately monthly intervals. In this way, after 6 -7 treatments, most of the hair follicles in any particular area can be successfully removed. After this series of treatments, any further hair growth can be treated as and when it's necessary.
